

First we show we're fine. Then we show we're about to get rich.

Twelve months of revenue, line by line, with the calm baseline first and the new product layered on top. The Inn and the Photography carry the year. Studio C's new chat-and-service product is the part that changes everything else.

BY TRACY ALDERSON-ALLEN, FINANCE

Natchez, Mississippi

Here is the simplest version of the next twelve months. The Inn pays the bills. Photography pays them again. Touring lifts the corridor. The magazine, the records, the radio show — those are catalog assets that pay nothing this year, and that is the plan, not a problem. Studio C runs on a small monthly retainer and steady overflow work. Add it all up and we land between the first-profit anchor and the baseline anchor. We are fine. That is the whole opening chapter.

Then a second story starts on top of the first one. Studio C just locked its first commercial customer for the new chat-and-service product Chase has been building. One customer at five hundred a month is not the headline. The headline is that the product is real, the pricing is set, the marketing is queued, and a pipeline of fifteen to thirty more customers is realistic between now and April. When that line lands on top of the existing forecast, the year stops being “fine” and starts being something else.

This document walks both stories in order. Calm baseline first. Then the upside, with the math in the open.

The calm baseline

Eight active revenue lines. Two of them carry the year. Three of them are zero by design. The rest fill in around the edges. Below is what each one is, what it makes, and where the honest unknowns live.

THE EIGHT REVENUE LINES, TODAY

REVENUE LINES — CURRENT STATE

LINE	STATUS	Y1 MID (12MO)	HONEST RANGE
Big Muddy Inn (rooms + bar)	Running	\$150,000	\$110k–\$180k
Chase Pierson Photography	Running	\$59,000	\$36k–\$75k
Big Muddy Touring (booking + Sprinter)	Running, light	\$32,000	\$15k–\$40k
Studio C (current production)	Running	\$16,500	\$12k–\$24k
MBT B2B pilots (Vicki, Paul Green)	Pre-contract	\$19,800	\$0–\$40k
Big Muddy Magazine (sponsored)	Pre-revenue	\$6,000	\$0–\$8.8k
Tuthill Design Photography	Books separately	TBD pending Tracy	—
Storefront prints + art sales	Pre-revenue	TBD pending Tracy	OK if low
Book sales	Pre-revenue	TBD pending Tracy	OK if zero
Big Muddy Records	Catalog asset	\$0	\$0 in Y1, honest
Big Muddy Radio	Pre-revenue	\$0	\$0 in Y1, honest
Big Muddy Acres (Phase 1 RV)	Capital pending	\$0	\$0–\$15k upside only
Total — existing operations		\$283,300	\$173k–\$380k

The TBD lines are deliberate. Tracy populates them when she pulls the real numbers. Tuthill bookings have their own ledger. Storefront prints and book sales are tiny today and that is fine — the page leaves space for them so the moment they start producing, the row gets a real number. Until then, zero is honest.

The two carriers tell the story by themselves. The Inn at one hundred fifty thousand and Photography at fifty-nine thousand together cover seventy-four percent of the year. Everything else is supplement.

WHAT ONE MONTH LOOKS LIKE, STACKED

October works because the Inn fills. The same picture in January — Inn at eight thousand, Photography at thirty-five hundred, the rest holding flat — comes in at eighteen thousand five hundred. Seasonality is the dominant variable. The forecast bakes that in.

TWELVE MONTHS, MID SCENARIO

Here is the row Tracy reads first thing each month. If the actual lands within twenty percent of the planned number, that is on track. If a peak month misses by more than thirty-five percent on the Inn line, that is the trigger to act — not panic, act.

MONTH-BY-MONTH, MID SCENARIO — EXISTING OPERATIONS ONLY

MONTH	INN	CPP	TOURING	MAG	STUDIO C	MBT B2B	TOTAL
May 2026	12,000	4,000	1,500	0	1,000	0	\$18,500
Jun 2026	11,000	4,500	2,000	0	1,000	0	\$18,500

MONTH	INN	CPP	TOURING	MAG	STUDIO C	MBT B2B	TOTAL
Jul 2026	10,000	5,000	2,500	0	1,000	0	\$18,500
Aug 2026	9,000	5,500	3,000	500	1,500	1,000	\$20,500
Sep 2026	11,000	5,500	3,000	500	1,500	1,500	\$23,000
Oct 2026	16,000	6,000	4,000	500	1,500	2,000	\$30,000
Nov 2026	17,000	5,500	3,500	500	1,500	2,000	\$30,000
Dec 2026	18,000	4,500	2,500	1,500	1,500	2,000	\$30,000
Jan 2027	8,000	3,500	1,500	1,500	1,500	2,500	\$18,500
Feb 2027	11,000	4,500	2,000	500	1,500	2,500	\$22,000
Mar 2027	14,000	5,500	3,000	500	1,500	3,000	\$27,500
Apr 2027	13,000	5,000	3,500	500	1,500	3,300	\$26,800
12-mo total	150,000	59,000	32,000	6,000	16,500	19,800	\$283,300

Two hundred eighty-three thousand for the year. The thesis sets a net floor of \$185k, a first-profit anchor of \$250k, and a baseline of \$330k. Mid scenario clears all three of the lower bars and gets within fifty thousand of the top one. That is “fine” in plain English.

The honest envelope around that number runs from \$173k on the low end to \$380k on the high. Low requires Chase to disappear into platform work and both pilots to stall. High requires three weddings and both pilots to sign and a Big Muddy Acres partial-open in Q4. The mid is the planning row. The other two are the side rails.

THE THREE SCENARIOS, SIDE BY SIDE

LOW — SURVIVAL

\$173k

Inn at the bottom of its range. Photography commissions thin. Pilots stall. Misses the net floor by ~\$12k. Uncomfortable, not lethal.

MID — THE PLAN

\$283k

Between first-profit (\$250k) and baseline (\$330k). The row Tracy plans against. The number this document treats as "fine."

HIGH — EVERYTHING WORKS

\$380k

Three weddings book. Both MBT pilots sign. Photography lands eight commissions a month. Above baseline.

This is where the calm chapter ends. Whatever happens with the new product, the existing operations land us between \$173k and \$380k for the twelve-month window. Most of the variance lives in the Inn and Photography lines — the two we already know how to drive.

“The Inn pays the bills. Photography pays them again. Everything else is the part of the year that gets to be interesting.”

. . .

PART TWO

The new layer

Studio C is the operating company behind a new chat-and-service product called Measurably Better Things. Customers open a chat. They ask it anything. If the chat can answer — which it usually can, because it knows their data — it answers. If it can't, the request escalates to the Studio C team, who handles it. Same chat. Same bill. The customer doesn't care whether the answer came from a model or a person. They care that the problem got solved.

Software answers cost cents. Human answers are the premium. The bill shows both meters running, separately, in real time. No surprise charges. Optional caps the customer sets themselves. That is the entire pricing thesis: *software is cheap, humans are the premium, and we bill them differently because they are.*

THE PRICE LADDER

\$0	Free Tire-kickers, lead funnel. Cheap models, limited routing, no human service.
\$20/mo	Standard — the consumer ceiling Same price as ChatGPT. They give you one model. We give you a router across thirty-plus specialists.
\$100/mo	Service — the target sell Includes 30 minutes of a real person’s time. The price point where the chat hits a wall and a human picks up.
\$200/mo	Operator Custom dashboards, 1–2 hours of human-tokens. Multi-property operators, small teams.
\$500/mo	Business — Scan2Plan’s tier First commercial customer locked at this price tonight. 4–6 hours of human-tokens, custom routing, full workspace customization.
Custom	Enterprise Dedicated service team, SLA, volume discount. Contract-priced.

The first commercial customer is Scan2Plan, locked tonight at the Business tier. Five hundred dollars a month, which captures the platform and a baseline allocation of human-tokens. Anything beyond the allocation runs on the published per-minute rate, billed against the visible meter. Customers paying more get a discount on the hourly rate — the bigger the monthly commitment, the cheaper the labor itself, because we can plan team capacity against it. Annual prepay knocks twenty percent off any tier, no usage caveats.

MODULES — WHAT STACKS ON TOP

The base subscription buys the chat door. Customers add capability modules as they need them. A solo operator at \$100 might add Bookkeeping for \$75 and skip everything else. A scanning company at \$500 might add Content Engine for \$200 and Customer Support for \$100. The modules are real money on top of the base — and the higher-touch modules carry meaningful margins because the labor inside them is real.

MODULE PRICING TIERS

CLASS	ADD PER MONTH	WHAT'S INCLUDED
Light	+\$20	Chat capability, occasional automation. Email triage, calendar coordination, custom prompts.
Standard	+\$50–100	Chat + ~1 hr/mo human-tokens. Bookkeeping, lead-gen, social posting, weekly reporting.
Specialized	+\$200–500	Chat + 3–8 hr/mo specialist tokens + dedicated queue. Video, podcast, brand identity, sales ops.
High-touch	+\$500–2,000	Chat + 10+ hr/mo + multi-skill team rotation. Full social management, agency-of-record, dedicated CSM.

WHY THE UPSIDE IS REALISTIC NOW

This is not a product launch happening in a vacuum. Five things landed in the last sixty days that compound:

WHY THE MARKETING ENGINE IS LOADED

- **Inverted Intelligence.** The brand thesis — *as AI gets cheaper, human work gets more valuable* — now anchors a radio show, a publication, and the campaign script. Two-word headline, infinite essays.
- **The campaign script.** “AI tells you. We do the rest.” One verbatim ad template, one variable per spot. Queued for TikTok, Reels, Shorts.
- **invertedintelligence.fm** — domain registered, show format set, first episodes drafted.
- **Marketing automation tooling locked.** Onboarded with Dragonfly, ready to start the campaign. (*Cos has flagged a question to Chase to confirm what Dragonfly specifically refers to in our stack — treating as marketing automation in the meantime.*)
- **Studio C team prepared.** Elijah on Chief of Staff, Miles on Production. The service layer has bodies behind it from day one.

The product has a real customer paying real money. The pricing is sealed. The team is named. The marketing is queued. That is the difference between a wishful upside and one we can actually plan against.

THE UNIT ECONOMICS, ONE CUSTOMER AT A TIME

Here is what an average customer produces in a month at the Service tier — the target sell — with one specialized module attached.

Service tier subscription	\$100
Standard module (Bookkeeping)	\$75
Beyond-allocation human work (avg 30 min/mo)	\$135
Per-customer monthly revenue	\$310

That is one customer. Now scale it. Below is the same chart, but with a hundred customers averaging two hundred dollars per month in subscription plus an extra one hundred in module add-ons and human-token usage.

100 customers × \$200 average tier	\$20,000
Module add-ons (avg \$75/customer)	\$7,500
Beyond-allocation tokens (avg \$50/customer)	\$5,000
Monthly recurring revenue	\$32,500

One hundred customers. \$32.5k of monthly recurring. That is a bigger line than the Inn. From a single product. Same Studio C team that already runs the operating businesses. That is the “rich” chapter, said in numbers.

We do not need a hundred customers in twelve months. The forecast below is more conservative than that. It plans for fifteen by Q4 and thirty by April under the mid scenario, fifty by April under the high. A hundred is the year-two picture.

The combined picture

Three scenarios. The existing-operations forecast stays the same in all three. What changes is how many MBT customers Studio C lands in the twelve-month window, what tier mix they sign at, and how aggressively the modules attach.

MBT CUSTOMER RAMP BY SCENARIO

ACTIVE MBT CUSTOMERS BY MONTH-END

SCENARIO	AUG	OCT	DEC	FEB	APR	AVG REVENUE / CUSTOMER / MO
Low (5 customers)	1	2	3	4	5	\$200
Mid (15 customers)	2	5	8	12	15	\$250
High (30 customers)	3	8	15	22	30	\$280
Stretch (50 customers)	5	15	25	38	50	\$300

The starting point in May is one customer (Scan2Plan, \$500/mo Business tier). The average revenue per customer climbs across scenarios because the high and stretch cases assume a richer module attach rate — customers who sign on a serious tier tend to add a serious module.

MBT REVENUE BY MONTH, LAYERED ON THE BASELINE

Here is the full picture. The dark column is what existing operations produce. The orange column is what the MBT layer adds in the mid scenario. The combined total is what the year actually looks like if Studio C lands fifteen customers.

COMBINED FORECAST — MID SCENARIO (15 MBT CUSTOMERS BY APRIL)

MONTH	CUSTOMERS	EXISTING OPS	MBT LAYER	COMBINED
May 2026	1	\$18,500	\$500	\$19,000
Jun 2026	1	\$18,500	\$700	\$19,200
Jul 2026	1	\$18,500	\$900	\$19,400

MONTH	CUSTOMERS	EXISTING OPS	MBT LAYER	COMBINED
Aug 2026	2	\$20,500	\$1,400	\$21,900
Sep 2026	3	\$23,000	\$2,100	\$25,100
Oct 2026	5	\$30,000	\$3,500	\$33,500
Nov 2026	6	\$30,000	\$4,200	\$34,200
Dec 2026	8	\$30,000	\$5,600	\$35,600
Jan 2027	10	\$18,500	\$7,000	\$25,500
Feb 2027	12	\$22,000	\$8,400	\$30,400
Mar 2027	13	\$27,500	\$9,100	\$36,600
Apr 2027	15	\$26,800	\$10,500	\$37,300
12-mo total		\$283,300	\$53,900	\$337,200

Mid scenario combined — existing operations plus a fifteen-customer MBT cohort by April — lands at \$337k. That clears the baseline anchor of \$330k. It also produces a steady run rate of roughly \$10,500 per month in MBT revenue by April, exiting the year on track for \$126k of MBT-only revenue across year two before any further customer growth.

THE TRAJECTORY, ALL FOUR SCENARIOS

ALL FOUR TOTALS AT A GLANCE

12-MONTH COMBINED REVENUE BY SCENARIO

SCENARIO	EXISTING OPS	+ MBT LAYER	COMBINED TOTAL	VS THE_THESIS BASELINE (\$330K)
Existing only (no MBT)	\$283,300	—	\$283,300	\$47k under
+ Low MBT (5 customers)	\$283,300	\$18,000	\$301,300	\$29k under
+ Mid MBT (15 customers)	\$283,300	\$53,900	\$337,200	\$7k over
+ High MBT (30 customers)	\$283,300	\$118,200	\$401,500	\$72k over
+ Stretch MBT (50 customers)	\$283,300	\$215,000	\$498,300	\$168k over

BEFORE AND AFTER, IN TWO CARDS

EXISTING OPS ONLY — WE'RE FINE

\$283k

12-month total. Above first-profit. Inn and Photography do the carrying. The picture without a single new product line.

+ MID MBT LAYER — WE'RE RICH

\$337k

Same year. Plus 15 MBT customers by April. Clears baseline. Sets up year two with a \$10k/mo recurring run rate from a single new product.

• • •

PART FOUR

Year two, briefly

The numbers above stop at April 2027 because that is the end of the planning window. But the slope of the MBT line is the part that matters for what year two looks like. A \$10k monthly run rate exiting April becomes \$120k of straight-line MBT revenue across year two, and that is before any additional customer growth. If Studio C continues adding customers at the mid-scenario rate (roughly one to two per month), the run rate at the end of year two looks closer to \$25k–\$30k per month, which annualizes to \$300k+ from MBT alone in year three.

Stack that on the existing operations — assuming the Inn and Photography lines hold flat, which they should and probably grow — and the year-three picture for the ecosystem comes in around \$600k–\$700k. That is the “rich” trajectory the title of this document refers to. None of it requires the existing businesses to do anything radically different. The new line is what changes the shape.

And the year-three picture has its own ceiling further out. Once MBT has a hundred customers, the math at the bottom of Part Two kicks in — one product line producing \$32k of monthly recurring at a hundred customers, which is a bigger line than the Inn. From the same Studio C team that already runs the chat and the service layer for the existing operations.

“Software is cheap. Humans are the premium. We bill them differently because they are. That is the entire pricing thesis — and it is the reason year two looks the way it does.”

. . .

PART FIVE

What this asks of each of us

Tracy: populate the TBD lines. The forecast cannot calibrate against estimates forever. The Cloudbeds trailing-twelve-month pull, the Tuthill Photography monthly average, the realistic storefront print and book sales numbers — once those are real, every Inn row in this document gets re-cut against actuals instead of estimates. That single exercise is worth more than any sales action because it makes every subsequent decision evidence-based.

Amy: keep the Inn shape on the page. The mid scenario assumes nightly rates hold, two whole-Inn buyouts in Q4, and two to three weddings in Q1. None of those happen by accident. Every booking inquiry that responds inside twenty-four hours moves the year-end number. The buyout funnel is the single highest-leverage line item in this entire document.

Chase: close one MBT pilot beyond Scan2Plan by end of Q3. Vicki Wolpert, Paul Green, the Hudson Valley broker network — whichever is closest to ready, push it. The mid scenario calls for fifteen MBT customers by April. Two are already realistic (Scan2Plan plus one of the pilots). Studio C’s outreach has to find the other thirteen. That is the work the marketing engine is queued for.

The whole document is the answer to one question Tracy asked at the breakfast table last week: *so are we okay?* The short version: yes. The long version is the seven pages above. The shorter long version is two numbers — \$283k if Studio C never lands a single MBT customer beyond Scan2Plan, \$337k if the campaign produces what we think it will, and a year-two trajectory that gets a lot more interesting than either.

Read it through. Mark it up. The numbers will move. The TBD rows will fill in. The combined column will get reconciled against actuals month by month. What we are signing off on this week is the shape, not the

precision.
