

What We Built for Scan2Plan vs. What Measurably Better Is

Hillbilly Dreams, Inc. — Product Differentiation Brief

March 30, 2026

CONFIDENTIAL

This document compares two distinct products: (1) the S2PX CPQ application built under contract for Scan2Plan LLC / Twinner LLC, and (2) the Measurably Better platform that powers the Big Muddy ecosystem. They share an author but are fundamentally different in architecture, purpose, scope, and market.

Section 1: What Scan2Plan Requested

The S2PX CPQ — A Single-Tenant Vertical Tool

Scan2Plan is a 3D laser scanning and BIM documentation company. They needed a workflow application that connects the sales process to production delivery in one system. What was built for them is a bespoke, single-tenant application for one company in one industry.

9 Features Delivered

1. **Sales Pipeline** — Kanban board with stages: Leads, Contacted, Proposal, Negotiation, On Hold, Closed Won, Closed Lost. Card-level filters, search, weighted forecast, deal count, pipeline total.
2. **Deal Workspace** — CRM-style lead detail with tabs: Lead Details, Quote Builder, Proposal, Documents. Contact data, billing data, project details, notes, and attachments all stay attached to the same lead.
3. **CPQ Calculator** — Multi-building, multi-discipline pricing engine. 15 database-driven pricing tables, quote version history, travel and risk logic, margin controls. 261 unit tests. The single most labor-intensive component — multiple full refactors due to repeated pricing logic changes.
4. **Production Pipeline** — Operations board tracking won projects from Scheduling through Scanning, Registration, Modeling, QC, and Delivered. Blocker enforcement for missing retainer, registration validation, square-foot audit, and outstanding balance.
5. **Proposal Builder + PDF Export** — WYSIWYG multi-page proposal editor. Cover page, company/about content, project summary, estimate table, payment terms, capabilities, differentiators, BIM standards. Versioned proposals, polished PDF generation.
6. **Signature Flow** — Dual-signature workflow. Internal sign first, then generate client signing link. Public signature page with PDF preview and capture fields. Audit trail. Deal auto-moves to Closed Won on client signature.
7. **Scan Tech PDF Generator** ("Mission Brief") — Field-ready brief for technicians. Project location, client contact, scope summary, areas, site conditions, special requirements, suggested equipment. Downloadable PDF.
8. **QuickBooks Integration** — OAuth2 connection. Create estimates from CPQ quotes, sync imported invoices and estimates into the pipeline, QBO status badges on deals, estimate PDF access.
9. **Google Drive Integration** — Auto-create project folder structure on deal close. Project dry file creation. Lead document migration. Attachment uploads from deal and production views.

Plus 7 AI Agents: Pricing Agent, Operator Agent, Photo Analysis, Checklist Generator, Audio-to-Scoping, Knowledge Base Chat, Strategy Advisor.

Infrastructure

Firebase-hosted SPA (React), Cloud SQL PostgreSQL (90 tables across 8 schema files, Drizzle ORM), Cloud Run API backend, 4 GCS storage buckets, Firebase Auth (Google OAuth only). Single GCP project: s2px-production.

Key point: This is a bespoke application built for ONE company (Scan2Plan / Twinner LLC) in ONE vertical (3D laser scanning). It does not serve multiple tenants, multiple industries, or multiple brands.

Section 2: What Measurably Better Actually Is

A Multi-Tenant, Multi-Brand Business Operating System

Measurably Better (MBT) is a multi-tenant, multi-brand business operating system that powers an entire media-hospitality ecosystem across 15 live domains from one Next.js codebase. It is fundamentally different architecture, fundamentally different purpose.

The Ecosystem It Powers (Live in Production)

- bigmuddytouring.com — Inn, music venue, touring
- bigmuddymagazine.com — Digital magazine, articles, city guides, photo essays
- bigmuddyradio.com — 18 shows, 7 hosts, live stream, playlists, podcasts
- bigmuddyentertainment.com — Entertainment company hub
- deepsouthdirectory.com — Local business directory with Stripe Connect
- buycurious.art — Art gallery with checkout flow
- bigmuddyrecord.com — Record label, artists, releases, sessions
- outsidereconomics.com — Economic philosophy, field manual
- measurablybetter.life — B2B platform + MBT Life consumer app
- superchase.app — Platform architecture
- hillbillydreamsinc.com — Parent company
- Plus: tuthilldesign.com, studiocvideo.com

Core Platform Capabilities

1. **Multi-domain routing** — Hostname-based route groups. One codebase serves 15+ brands with distinct layouts, navigation, and themes.
2. **Admin Dashboard** — 35+ pages. Personalized per user (Chase, Tracy, Amy, JP each see different tools and stats). Ecosystem view, creative studio, content library, finance, deploy status.
3. **Ops Dashboard** — Ambient mode, AI chat, content library, task board, reviews, gallery management, session tracking, property management.
4. **Client Portal** — Calendar, reports, reviews for Deep South Directory subscribers.
5. **Directory Engine** — Submit, claim, onboard businesses. AI enrichment. Stripe Connect for payments.
6. **Media Production Pipeline** — 6 campaign concepts, 27 production jobs. ElevenLabs TTS voiceover, Veo video generation, GCS artifact storage, approval workflow.
7. **AI Model Routing** — Multi-provider: Gemini 3.1 Pro (reasoning), Gemini 2.5 Flash (generation), Perplexity (search), Vertex AI Imagen 3 (images), Veo 3.1 (video), Cloud TTS Journey (audio). Automatic failover.

- 8. **Broadcasting Stack** — OpenBroadcaster + Icecast on dedicated hardware. 18 radio shows with full schedule. Plex media server. ElevenLabs voice synthesis.
- 9. **MBT Life Consumer App** — Community coordination: profiles, skill listings, task board, time banking, tool library, contributed listings, contributor credits.
- 10. **Consent and Privacy** — Real-identity-required consent dialog. No anonymous mode.
- 11. **Kiosk Mode** — 3 display modes for physical inn deployment.
- 12. **Photo/Content Pipeline** — GPS-guided shot lists, editorial processing, GCS upload, directory listing auto-creation.

Infrastructure

Next.js 14 on Vercel, Prisma + Neon PostgreSQL (50+ models), Google Cloud (Vertex AI, GCS, Cloud TTS), Stripe (Connect + Billing), multi-provider AI routing. Monorepo with Turborepo. Two machines: MacBook Pro (development/deployment) + Mac Mini (broadcasting/services).

Section 3: Side-by-Side Comparison

Dimension	S2PX (Built for Scan2Plan)	MBT (Big Muddy Platform)
Purpose	Workflow tool for one 3D scanning company	Business OS for a multi-brand media-hospitality ecosystem
Tenancy	Single-tenant (Scan2Plan only)	Multi-tenant (15+ domains, multiple brands)
Industry	3D laser scanning / BIM	Media, hospitality, music, publishing, art, local commerce
Users	Scan2Plan employees (5–10 people)	Public visitors + 4 team members + DSD subscribers + artists + musicians
Domains	scan2plan.io (1 domain)	15 live production domains
Frontend	Firebase-hosted SPA (React)	Next.js 14 SSR/SSG on Vercel
Database	Cloud SQL PostgreSQL (90 tables, Drizzle ORM)	Neon PostgreSQL (Prisma ORM, 50+ models)
Auth	Firebase Auth (Google OAuth only)	NextAuth v5 (Google OAuth + email whitelist + role-based personas)
AI	7 task-specific agents (Gemini only)	Multi-provider routing: Gemini + Claude + Perplexity + Imagen + Veo + ElevenLabs + Cloud TTS
Content	None — internal operations tool	Magazine, radio (18 shows), podcast, field manual, city guides, photo essays
Commerce	QuickBooks estimates/invoices	Stripe Connect (directory), Stripe Billing (subscriptions), gallery checkout
Media Production	None	Video pipeline (Veo), voiceover (ElevenLabs TTS), image generation (Imagen 3), broadcasting (OBS + Icecast)
Public Facing	Client signature page only	200+ public pages across 15 domains
Marketing	None	Social content queue, AI-drafted posts, campaign calendar, SEO pipeline
Physical Integration	None	Kiosk mode (inn lobby), broadcasting hardware (Mac Mini), GPS shot lists
Community	None	MBT Life: skill listings, task board, time banking, tool library
Philosophy	None	Outsider Economics field manual, "The Extraction Trap" framework

Dimension	S2PX (Built for Scan2Plan)	MBT (Big Muddy Platform)
Code Ownership	Source code retained by Chase Pierson	Hillbilly Dreams, Inc. IP

Section 4: Where There Is Overlap (And Why It Is Different)

QuickBooks Integration

Both connect to QBO. S2PX syncs estimates and invoices for a scanning company. MBT syncs for hospitality revenue (inn, bar, shows, directory subscriptions). Same API, completely different business context.

Google Cloud

Both use GCP. S2PX uses Cloud SQL + Cloud Run + GCS for a single-tenant application. MBT uses Vertex AI (Gemini, Imagen, Veo, embeddings) + GCS + Cloud TTS as an AI infrastructure layer powering multi-provider model routing. The GCP usage is architecturally different.

Pipeline / Kanban Concepts

S2PX has a sales pipeline (leads to closed won) and production pipeline (scheduling to delivered) for scanning projects. MBT has a media production pipeline (script to voiceover to video to review to published) for content creation. Same UX pattern, completely different domain.

Proposal / Document Generation

S2PX generates scanning proposals and field mission briefs as PDFs. MBT generates articles, social posts, radio spots, posters, and newsletters. Same concept (AI-assisted document creation), different outputs entirely.

AI Chat

S2PX has a knowledge base chat scoped to internal scanning documentation. MBT has an ops chat that knows the entire ecosystem — all 15 brands, all team members, all shows, all venues. Same interface, vastly different scope and training data.

The Fundamental Difference

S2PX is a vertical tool. Measurably Better is a horizontal platform.

S2PX helps one company do one thing better. MBT is the infrastructure that runs an entire local economy — media, hospitality, commerce, community, broadcasting, publishing — from a single codebase.

The architecture that runs a Viacom can run a small-town media economy. That is what Measurably Better is. S2PX is a feature inside that vision, not a precursor to it.
